

**European road elements Lite**

## Description:

Two-lane and four-lane roads and streets, parkings, bust stops, intersections, road signs used in european countries.  
151 elements

- 8 straight elements
- 16 curve elements
- 15 intersections (7 animated)
- 4 connection elements
- 2 bus stop elements
- 2 cross-walk elements
- 6 parking elements
- 97 road signs
- 1 street lamp

## Formats:

### Autodesk 3ds Max (.max)

**version: 9**

151 files

107 809 649 byte (102,81 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, animation

### Autodesk FBX (.fbx)

**version: 2009**

151 files

90 379 185 byte (86,19 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, animation

### Autodesk Maya (.ma)

**version: 2011**

151 files

85 913 969 byte (81,93 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, animation

### Maxon Cinema 4D (.c4d)

**version: 10**

151 files

75 494 197 byte (71,99 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, animation

### Wavefront OBJ (.obj)

151 files

51 046 243 byte (48,68 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, **no animation**

### NewTek Lightwave (.lwo, .lws)

**version: 8**

151 scene files, 156 object files

29 427 949 byte (28,06 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, animation

### Collada (.dae)

**version: 1.4**

151 files

73 172 690 byte (69,78 Mbyte)

materials, textures, UVW coordinates,  
smoothing groups, animation

## Geometry:

- each file contains only one object
- polygonal based objects
- polygons are quads and triangles
- objects have custom pivots (easy aligning objects)
- logically named files and objects
- smoothing groups

**Whole pack (151 objects):** 114709 polygons, 128517 vertices

Object name	poly	vert	Object name	poly	vert

**Materials:**

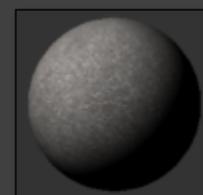

- **max:** All objects use the same material (sub object material with 23 sub material). If you merge objects into one scene, you can use the same material for all objects.
- **fbx:** Each object file contains only the used sub-materials.
- **maya:** Each object file contains only the used sub-materials.
- **c4d:** Each object file contains only the used sub-materials.
- **obj:** All objects use the same material file (european road collection.mtl), that contains 23 sub-material.
- **dae:** Each object file contains only the used sub-materials.
- **lwo:** Each object file contains only the used sub-materials.

[\*\*custom\\_map08.png\*\*](#)

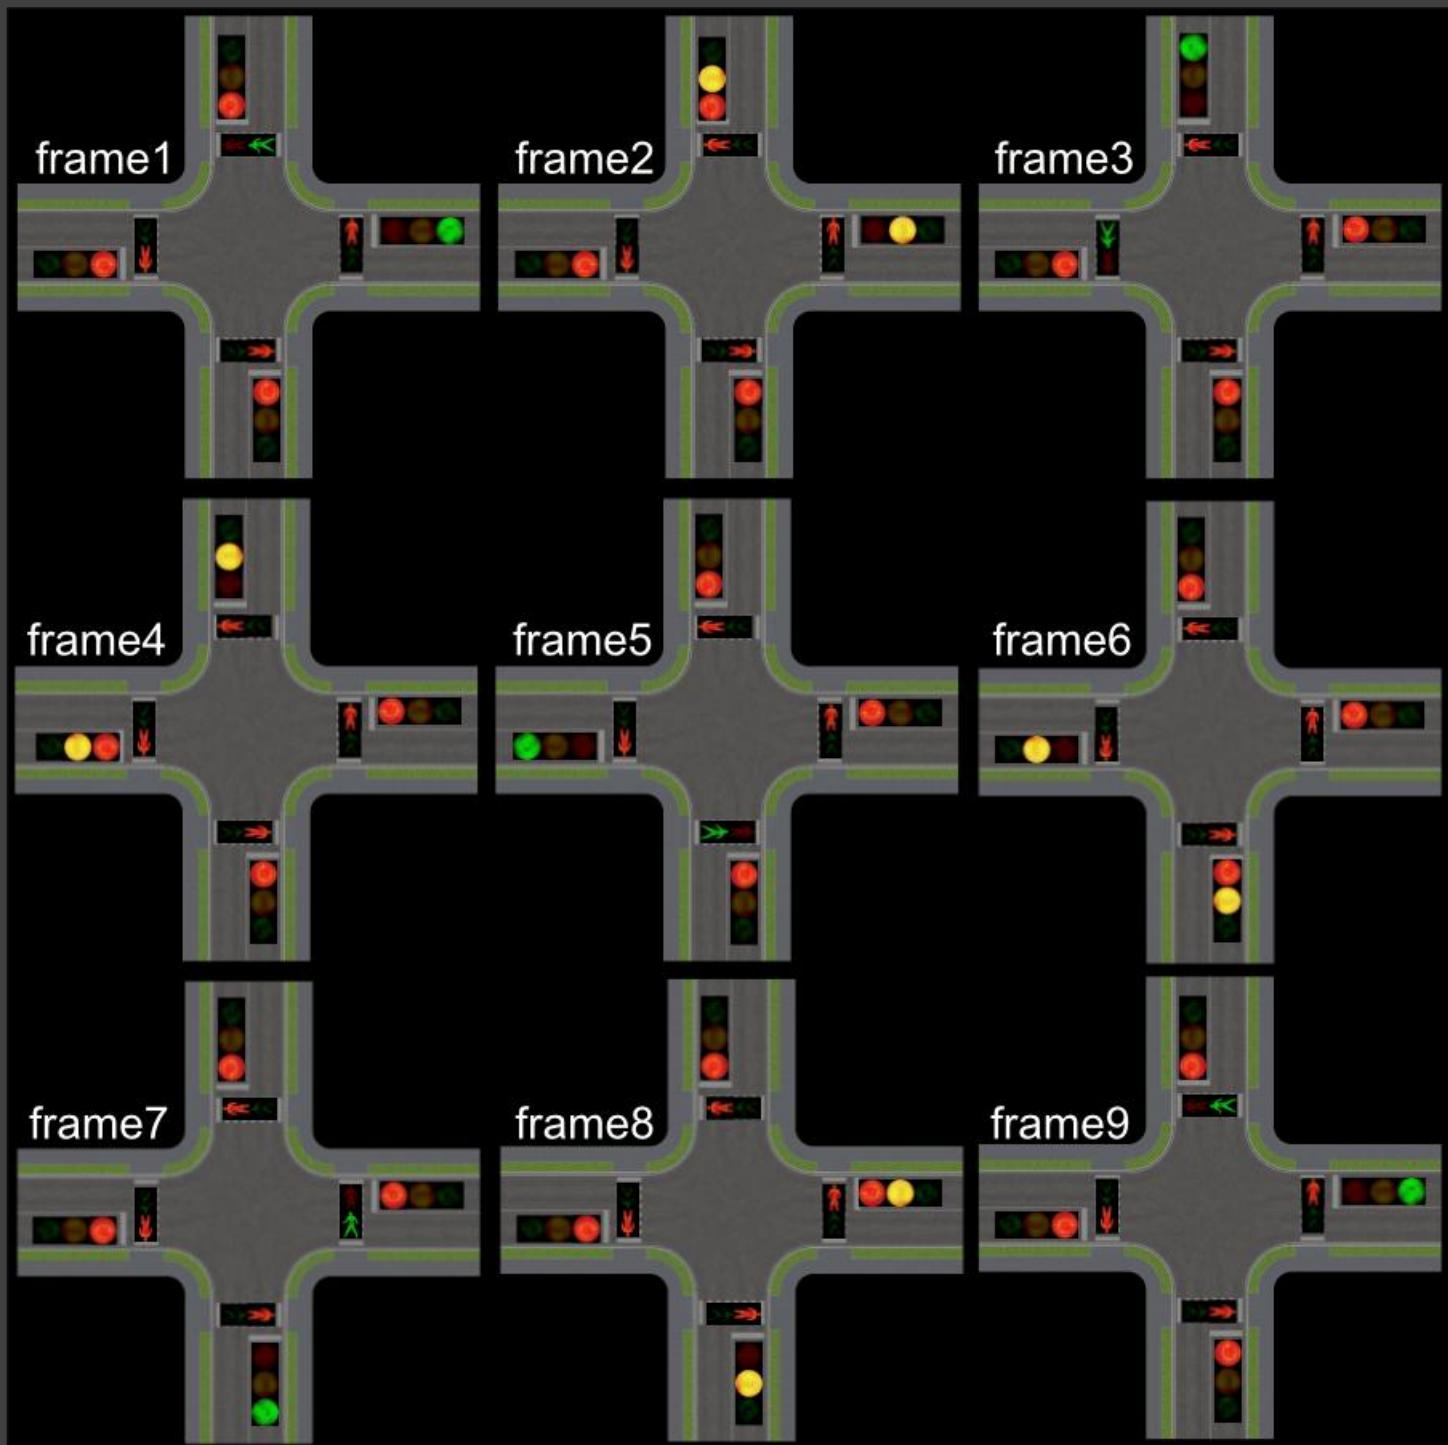

[\*\*custom\\_map08b.png\*\*](#)

If you want to use a custom grass texture, replace the existing grass texture (map06.jpg), and the gravel texture (map08.jpg, map08b.jpg) with your own one. A custom gravel texture without grass has included in the pack. Create a 590 x 1024 pixel image from your grass texture, open it with an editor (eg. Gimp 2, Photoshop), create a new layer, and paste the custom\_map08.png into the new layer. Do the same with the gravel bump texture too.

**Animation:**

Wavefront OBJ format doesn't contain animation!!

Intersections with traffic lights are animated. You can easily control the traffic-lights in game, by splitting the animation, (animation1: frame0 – frame1; animation2: frame1 – frame2; ...) and run the specified part-animation when you want to switch the lamp. The lamps are named logically, so you can easily control the lamps by yourself, if you don't want to use the built-in animation. Just turn the lamps by 180 degrees around the up axis. Here's an example how the built-in animation works:

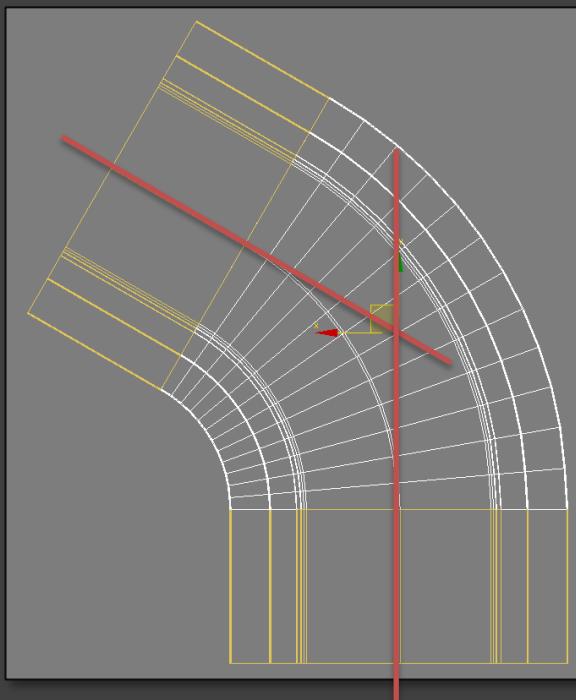

The following objects are animated:

- intersection street 2 lane - 2 lane trafficlights (9 frames, 24 fps)
- intersection street 4 lane - 2 lane trafficlights (11 frames, 24 fps)
- intersection street 4 lane - 4 lane trafficlights (9 frames, 24 fps)
- intersection T street 2 lane - 2 lane trafficlights (9 frames, 24 fps)
- intersection T street 2 lane - 4 lane trafficlights (9 frames, 24 fps)
- intersection T street 4 lane - 2 lane trafficlights (7 frames, 24 fps)
- intersection T street 4 lane - 4 lane trafficlights (9 frames, 24 fps)

### Usage:

All elements are compatible with each other, and all elements have the same base-size (600m, 1200m, 1800, 2400m, ...). So you can easily connect the elements, and don't need custom size connectors. Use the pivots in local coordinate system to align the elements.

Heavenly Pictures 3D
